

RAHUL PATEL

Tech Lead • Full-Stack Engineer • 12+ Years

+91 903-304-3379 | rahul.patel786@gmail.com | Ahmedabad, India
[linkedin.com/in/rahhuul](https://www.linkedin.com/in/rahhuul) | github.com/rahhuul | rahhuul.github.io (Portfolio)
Available for fully remote work · US Eastern timezone aligned

PROFESSIONAL SUMMARY

Tech Lead with 12+ years delivering production-grade web applications at scale. Led teams of 7-10 engineers, owned full product lifecycles end-to-end, and independently shipped 3 open-source products from zero to launch. Proven track record solving high-stakes infrastructure bottlenecks including a queue-based rewrite that cut database load by 60% on a pipeline processing 5M daily events. Remote-first, US Eastern aligned, and available immediately.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, PHP, Solidity, SQL, HTML5, CSS3

Frontend: React, Next.js, React Native, Angular, Redux, Zustand, Tailwind CSS, GSAP, Framer Motion

Backend: Node.js, Express, Fastify, Laravel, REST APIs, GraphQL, WebSockets, Microservices

Databases: PostgreSQL, MySQL, MongoDB, Redis, Prisma ORM, Eloquent ORM

Cloud & DevOps: AWS (EC2, S3, RDS, Lambda), Docker, Vercel, GitHub Actions, CI/CD, Nginx, Linux

CMS: WordPress, WooCommerce (custom themes, plugins, REST API, Gutenberg blocks)

Blockchain: Solidity, Hardhat, ethers.js, ERC-721, ERC-20, Web3.js, Ethereum Mainnet

AI & Tooling: Claude API, MCP (Model Context Protocol), Prompt Engineering, RAG Pipelines

Tools: Git, Jira, Figma, Postman, VS Code, Claude Code

OPEN SOURCE & PRODUCTS

APILens API Observability SaaS apilens.rest

- Existing APM tools were too heavy and expensive for indie developers needing lightweight API tracing, so built a full-stack monitoring platform (Next.js + Node.js + PostgreSQL) with a zero-dependency Express/Fastify middleware using AsyncLocalStorage-based request tracing and a real-time WebSocket dashboard **benchmarked at 600K+ requests/min**.

CMS MCP Hub 589 AI Tools for 12 CMS Platforms github.com/rahhuul/cms-mcp-hub

- AI assistants lacked native integrations to manage content across WordPress, Shopify, Ghost, and other CMS platforms, so built a Turborepo monorepo of Model Context Protocol servers with Zod-validated schemas and a universal REST gateway shipping **589 tools across 12 platforms** and publishing under the @cmsmcp npm scope, now live on the MCP Registry.

CodePulse AI AI-Powered Code Security Scanner rahhuul.github.io/codepulse-ai

- Manual code reviews routinely miss silent vulnerabilities like SQL injection and XSS built a Claude API-powered scanner that accepts GitHub URLs or ZIP uploads and **automatically detects security issues and performance bottlenecks** actively in development, targeting significant reduction in manual security review time.

WORK EXPERIENCE

Tech Lead | **Pranshtech Solutions**

Jul 2023 - Mar 2026

Ahmedabad, India · Full Remote · US Eastern Timezone

- The 10DLC SMS compliance process was stalled with no clear owner, blocking revenue across all client campaigns stepped in to take full ownership handled brand registration, campaign setup, and compliance

workflows end-to-end, **restoring compliant SMS delivery and unblocking the revenue pipeline within weeks.**

- New client website setup consumed 2-3 days of manual effort spread across multiple tools designed and built a **fully automated provisioning pipeline** integrating Namecheap API → Cloudflare DNS → cPanel, drawing from 50+ templates with AI-generated content **reducing setup time from 2-3 days to under 15 minutes (95%+ reduction).**
- A database ingesting **3.5M-5M delivery reports daily** was collapsing under write pressure and causing cascading slowdowns across the system diagnosed the bottleneck and redesigned the ingestion layer with a queue-based architecture using parallel and sequential processing lanes **reducing database load by ~45%** and restoring system stability.
- A 7-10 person engineering team across 5+ concurrent projects had no shared standards, resulting in frequent production incidents introduced code review processes, CI/CD pipelines via GitHub Actions, and engineering best practices **cutting production incidents by ~40%** and achieving on-time delivery across all projects.
- Junior and mid-level developers had no structured growth path, creating a skill ceiling that limited team throughput introduced pair programming, architecture walkthroughs, and structured code reviews **growing 5 developers to senior-level contributors** without increasing headcount.
- Managed AWS infrastructure (EC2, S3, RDS) including server provisioning, auto-scaling policies, and 24/7 monitoring maintaining **99.9%+ uptime** across all client applications.
- Collaborated async with US-based stakeholders via Trello and Skype/Teams on sprint planning, roadmaps, and release schedules **operating fully on US Eastern timezone** despite being based in India.

Full-Stack Developer & Project Lead | [Global India Technologies](#)

Nov 2017 - Jun 2023

Ahmedabad, India · On-site with US/EU remote clients

- Owned the full delivery lifecycle documentation, DB architecture, sprint planning, client communication, and hands-on development across PHP/Laravel, Node.js, React, WordPress, and CodeIgniter delivered **50+ production web applications** with a **95%+ on-time rate** across combined project budgets exceeding **\$200K.**
- sportsbets.io required real-time odds, live match tracking, and in-play betting at low latency built core platform features using WebSockets for live data streaming with integrated payment and odds logic delivering a **production-ready sports betting platform** handling thousands of concurrent real-time sessions.
- Three NFT clients needed end-to-end blockchain delivery with no existing in-house expertise self-learned Solidity, Hardhat, and ethers.js, then wrote and deployed **3 smart contracts on Ethereum mainnet** (ERC-721 and ERC-20) and built minting, listing, and auction frontends with MetaMask integration all 3 projects launched successfully.
- Weekly deployments were error-prone and slowing client delivery cycles introduced Git branching workflows, mandatory code reviews, and automated CI/CD pipelines **reducing deployment errors by 70%** and compressing release cycles from weekly to daily.
- Designed database schemas and REST APIs for e-commerce applications processing **10K+ daily transactions**, ensuring data integrity and query performance under sustained load.

Senior PHP Developer | [Siddhi Infosoft](#)

Aug 2016 - Oct 2017

Ahmedabad, India · On-site

- On the first day, was handed a WordPress plugin project with zero prior WordPress experience and a tight deadline learned the plugin architecture and APIs independently, then **delivered a fully functional plugin within 3 days** setting the tone for rapid onboarding throughout the role.
- Three production applications needed mobile REST APIs backed by a responsive Angular.js frontend built the APIs using Yii/PHP, integrated Angular.js, and designed MySQL schemas for each app **delivering all 3 to production** with full coverage.
- Worked across **6 frameworks and CMS platforms** simultaneously WordPress, Joomla, Laravel, CodeIgniter, Core PHP, and Yii while learning AngularJS mid-sprint on a live production project.

PHP Developer | Global India Technologies

Aug 2013 - Jul 2016

Ahmedabad, India · On-site

- Joined as a fresher with no production track record delivered a cPanel-style file management system with FFmpeg integration within the first 3 months, followed by a virtual card selling platform and a WebRTC video streaming service in the next 3 months **earning a promotion to Senior PHP Developer in just 6 months** based on delivery speed and code quality.
- Built custom jQuery plugins and real-time features using Ajax and PHP WebSockets, expanding the team's frontend capability and introducing interactive UI patterns that became standard across client projects.
- Developed and integrated WordPress and Joomla CMS solutions for **10+ client sites**, handling both frontend and backend work independently from requirements to deployment.

Database Administrator | Rural Shores Technologies

Dec 2011 - Jun 2013

Gandhinagar, India · On-site

- Report generation on the SEC Census project covering **500K+ records** was critically slow due to unoptimised queries rewrote core SQL logic for data extraction, reporting, and cross-referencing, **reducing report generation time by 50%** and significantly accelerating the government data initiative.
- Trained 5 colleagues on data input and export procedures and monitored database efficiency first experience owning knowledge transfer and team process in a structured setting.

EDUCATION

Diploma in Computer Science & IT

2007 - 2011

Government Polytechnic, Gandhinagar, India · AICTE Approved, Gujarat Technical Education Board
